STAR TREK THE NEXT GENERATION®

UNITED FEDERATION OF PLANETS
STARFLEET COMMAND

WELCOME TO THE 24TH CENTURY!

You are privileged to join the Federation Starship Enterprise™ on her adventure entitled, "Future's Past." You will travel to strange new worlds, find new life and new civilisations, and *"boldly go where no one has gone before."*™

This voyage, though, will be different from any other you may have taken. Starfleet Command will have some assignments for you, but *you* will be in control of the ship. You can choose to visit hundreds of planets, use the ship's weapons to defend yourself against hostile vessels, choose which crew members go on Away Team missions and direct their actions as they explore the unknown worlds.

The fate of the galaxy is in your hands, for even the simplest-seeming mission can have vast, unexpected consequences. If you perform your tasks well, with imagination and courage, the United Federation of Planets will honour your achievements. Good luck!

SETTING UP THE GAME

Star Trek: The Next Generation® is a one-player game. Plug the Super NES Controller into the left controller socket only.

To enter the world of *Star Trek: The Next Generation*, insert the Star Trek Game Pak into your Super Nintendo Entertainment System and then turn the power ON. You will then be presented with the title screens, after which you will be briefed by an entry from Captain Picard's log. Once you've read the captain's log entry, press either the **A** or the **X** Button to make it go away. Now your adventure can truly begin.

WHAT ARE ALL THOSE BUTTONS ON THE CONTROLLER, ANYWAY?

The Super NES Controller is laid out as follows:

Pressing the **START** Button will always **pause** the game, and pressing it a second time will **resume** the game. The other buttons work differently depending on which screen you're using. We'll explain these functions screen by screen.

THE SHIP'S BRIDGE

After the captain's log entry, you will find yourself facing the viewscreen on the Bridge, where the **Right** and **Left** arrows will take you to the different stations. There are seven control stations on the Bridge: **communications**, where you can talk to other people; **the conn**, where you set the ship's course; **the briefing room**, where you can get advice from Captain Picard about what to do next; **the sensors**, where your analytical detectors can scan unknown objects; the ship's **computers**, where you look up information; **the engineering station**, where you go to repair the ship when it's damaged in battle; and **the Transporter Room**, where you select an Away Team to visit other sites. A label at the bottom of the screen tells you which station you're currently viewing.

EXPLORING THE BRIDGE

When you're on the Bridge, you stand in the centre with the control stations around you. Use the **Right** or **Left** arrow keys on the Control Pad to turn a full 360° and see the complete Bridge. As with any circle, you can go in either direction; for simplicity's sake, this tour will go in a clockwise direction.

You start out facing the **viewscreen**, which shows you what's outside the ship. This is actually two systems in one. When someone is hailing you, the light at the top of the screen flashes green and the word "Communications" appears at the bottom.

Hailing light on

Communications lets you receive messages from other people. When no one is hailing you, the word "conn" appears instead and you are at the **conn**, where you can set the ship's course and speed.

Hailing light off

From the front viewscreen, press the **Right** arrow to reach the **briefing room**.

From the **briefing room**, press the **Right** arrow to move clockwise to the **sensors**.

STAR TREK

THE NEXT GENERATION®

From the sensors, press the **Right** arrow to move clockwise to the **computers**.

From the computers, press the **Right** arrow to move clockwise to the **engineering station**.

From the engineering station, press the **Right** arrow to move clockwise to reach the turbolift doors that take you to the **Transporter Room**.

From the turbolift, press the **Right** arrow to return to the viewscreen. Congratulations! You have now made a complete circle and located all the stations on the Bridge.

COMMUNICATION

Being hailed

You will hear a beeping sound when someone is hailing you. Go to the viewscreen, where you will see the green light flashing at the top of the screen. Press the **A** Button, and the image of the person hailing you will appear on the viewscreen along with the text of what he or she is saying. If there's too much text to fit on the screen at one time, press the **Up** and **Down** arrows on the Control Pad to scroll up and down so you can read the whole message. Press the **A** Button again to return to the Bridge when you're finished.

When the viewscreen is blurry

If your communications system has been damaged in combat, you can't receive messages as clearly as you normally could. See the section on the engineering station, below, to learn how to fix the problem.

REACHING YOUR DESTINATIONS

You go to the conn to change the ship's course and set a new destination. Use the Control Pad to take you to the viewscreen, then press the **A** Button to enter the astrogation system.

What the star and cluster names mean

To simplify astrogation, places are identified by a series of names. The stars in your ship's patrol region have been grouped into eight different clusters, and the cluster name is the first level you choose. Within each cluster, the stars are named by Greek letters according to how bright they are. The planets of each star are listed by Roman numerals according to their distances from their sun, and the moons of a particular planet are listed by Roman letters according to their distance from the planet. The destination "Codis Alpha IVB" means go to the brightest star (alpha) in the cluster Codis, then look at the fourth planet out and go to its second moon.

What the conn looks like

In the upper left-hand corner of this screen is a pictorial display of possible destinations. Below the display is a menu list. Use the **Up** and **Down** arrows on the Control Pad to scroll through the names on the list, highlighting each name in turn. There may be so many names on the menu list that they don't all fit on the screen at once, but you can scroll to them all using the

Up and **Down** arrows. In the upper right-hand corner is information about reaching your destination.

Choosing a destination

If you're already on your way to a destination when you enter the astrogation screen, you will find that destination pre-selected. If you have no current destination, you will see the screen for choosing a cluster.

The highest level of the astrogation panel lists the clusters; when a cluster is highlighted, its stars appear in a different colour in the visual display. Pressing the **A** Button selects the highlighted cluster and takes you down to the next level in the list, where you can select a particular star within that cluster. The **A** Button always takes you down to a more specific level.

Pressing the **X** Button will move you up one level on the list. If you're on the top level (cluster choices), pressing the **X** Button will return you to the Bridge without selecting a destination. If you have a destination selected and want to return to the Bridge without changing it, press the **X** and **Y** Buttons together.

STAR TREK

THE NEXT GENERATION®

Choosing a warp speed

The display in the upper right-hand corner shows information about your selected destination. The first line shows its distance from your current position, the second line shows your currently selected warp speed, and the third line tells you how long it will take to reach the destination at that speed. Bearing and Mark define the destination's position relative to your ship.

You can increase or decrease your warp speed by pressing the **Right** or **Left** arrows on the Control Pad. Your ship's computer will notify you if you pick an unreasonable speed.

Damaged engines

If your ship's engines have been badly damaged in combat, you'll see a message saying that the system has been shut down. You can't go anywhere until you make repairs. See the section on the engineering station, below, to learn how to repair the engines.

Warping out

Pressing the **B** Button selects the destination, starts you on your way and returns you to the Bridge.

CONFERRING WITH THE SENIOR OFFICERS

If you're uncertain where you should go or what you should do, you can always get advice from the ship's senior officers. Go to the briefing room and press the **A** Button to see what they suggest. Press either the **A** or the **X** Button to return to the Bridge.

Your ship's officers are among the most capable in Starfleet. Their advice is bound to be good. Remember, though, that *you* are now commanding the ship and you make the final decisions.

USING YOUR SENSORS

The sensors let you study objects from afar. The information you learn may help you understand and deal with some of the problems you'll encounter.

STAR TREK

THE NEXT GENERATION®

Activating the sensors

Go to the sensors and press the **A** Button to activate them. The sensors will scan the closest object within range and present a report about it. Use the **Up** and **Down** arrows to scroll through the report if necessary.

Returning to the Bridge

When you've finished reading the sensor report, press the **X** Button to return to the Bridge.

USING THE COMPUTERS

The ship's computers can give you background information about various subjects. Some entries may even help you solve the game's puzzles. Press the **A** Button when you're at the computers to start exploring the system.

You will see a menu of general topics. Use the **Up** and **Down** arrows to scroll through the menu. When the topic you want is highlighted, press the **A** Button to

move forward to that topic's submenu. Continue moving forward like this until you reach the specific entry you're looking for. You may then use the **Up** and **Down** arrows to scroll through the entry's text.

Pressing the **X** Button will move you back up the submenus one at a time. When you're on the top level, pressing the **X** Button will return you to the Bridge. You can exit to the Bridge from any point by pressing the **X** and **Y** Buttons at the same time.

REPAIRING THE SHIP

If the ship was damaged during engagement with a hostile adversary, go to the engineering station. Here you can decide what percentage of the ship's resources you want to devote to repairing the damaged systems. Press the **A** Button to call up the engineering screen.

What resources do you have?

The top line is labelled "Resources." A blue line beside the label shows the total amount of work your crew can

STAR TREK

THE NEXT GENERATION®

put into fixing the ship at any given time. This line will shrink as more resources are spent to repair the ship after space battle.

Which systems need repair?

Below the top line are the names of the 10 major ship systems: Shields, Weapons, Engines, Life Support, Sensors, Navigation, Hull, Transporter, Computer and Communications. A damaged system will have a red bar next to its name. The longer the bar is, the more damage the system has suffered.

A damaged system will not work well and could endanger your mission. Damage to shields, weapons and engines will keep you from manoeuvring and defending yourself well when you're attacked. If your life support system is damaged, your crew will not regain any health they lost on Away Team missions; if your hull is too badly damaged, your ship cannot survive. If your sensors or computer is damaged, you won't be able to get information from those systems. If there is damage to the navigation system, you can't fly the ship where you want to go. If your communications system is damaged, you'll have difficulty receiving incoming messages, and if your transporter is damaged, you won't be able to beam an Away Team to their current mission.

How do you repair a system?

You must spend some of the ship's resources to fix a damaged system. Use the **Up** and **Down** arrows to highlight the system you want to repair. Pressing the

Right and **Left** arrows on the Control Pad increases or decreases the resources you're spending on that system (as indicated by a blue line inside the red bar). The more resources you spend, the faster the system will be repaired—but the fewer resources you'll have left over to repair other systems. Pressing the **R** or **L** Button will give you a greater control over the resource increase or decrease by moving the blue line in smaller increments.

Why are Shields, Weapons and Engines a different colour?

The top three systems also have submenus for specific shields, weapons and engines respectively. To reach these submenus, highlight the main menu and press the **A** Button. Then follow the same procedure for spending resources. If you don't use the submenus, any resources spent on the top menu will be divided equally among its subsystems. Press the **X** Button to back out to the top menu.

Returning to the Bridge

When you've finished authorising repairs, press the **X** Button to return to the Bridge. The repairs will be made over time according to the resources you spent.

STAR TREK

THE NEXT GENERATION®

DEFENDING THE SHIP FROM ATTACK

Your ship will automatically go to red alert when it's attacked. The klaxon will sound and you will be taken automatically to Worf's tactical station screen.

What you'll see

You can see part of the front viewscreen over the top of your console. Below that, on your control console, you see a view of space immediately around you. Your ship is always placed at the centre with the opposing ship moving around it.

The grid

The grid system scales itself depending on how far away the opposing ship is from yours. If you're far apart, the grid squares are small. When you get closer to your opponent, the grid squares become larger.

The ship display

On the right-hand side of the screen is an image of your ship showing the condition of its six different shields and its fore and aft weapons banks. The shields are green when they're in perfect working order. As they suffer damage, they become dimmer and must be repaired before they will work again. The phaser banks show up as red areas on the fore and aft parts of the ship. When they're bright red, they're fully charged. As you use them, they dim to black, and you must wait until they charge again before you can use them. The yellow light indicates your auxiliary power is working. You have four photon torpedo tubes fore and aft, represented by silver buttons at the top and bottom of the display. When the button is lit, the tube has a torpedo ready to be fired; when the button is dark, the tube is empty and you must wait for it to be reloaded. A gauge at the bottom of the display shows how many photon torpedo casings you have left.

Controls

There are two different sets of controls that can be worked independently or together. One set controls how the ship moves through space. The other set controls your phasers and photon torpedoes.

Moving around

Use the Control Pad to move your ship around. Press the **Up** arrow to give the ship forward thrust (that is, in the direction it's facing) and the **Down arrow** to give

STAR TREK

THE NEXT GENERATION®

the ship backward thrust. Press the **Left** arrow to rotate the ship counterclockwise; press the **Right** arrow to rotate the ship clockwise. The ship will stop rotating when you take your finger off the Control Pad.

Firing your weapons

Your ship is equipped with fore and aft phasers and fore and aft torpedo tubes. If your opponent is in front of you, your computer will automatically fire the forward weapons; if the enemy is behind you, the computer will fire the aft weapons. Use the **A** Button to fire your phasers and the **B** Button to fire your photon torpedoes.

Energy allocation during battle

During space combat, the ship's engineers are busy trying to keep the shields and weapons functioning and have no time for anything else. Pressing the **R** Button will shift some of your auxiliary power to the shields. If you press the **L** Button instead, it will shift auxiliary power to the phasers.

Enemy damage

In the lower left-hand corner of the tactical screen are two silver lines representing the amount of damage done to your opponent's ship. The upper line represents shield strength and the lower line shows damage to the hull. These lines shrink as you do more damage and grow again as the opposing ship repairs its shields and hull.

Hailing during battle

If your opponent has received serious damage, he may decide it's better to talk with you than fight. The message "Enemy hailing" will appear in the lower left-hand corner of your screen. If you want to answer your opponent's hail, press the **X** and **Y** Buttons at the same time. You will be returned to the Bridge, where you may go to the viewscreen and answer the hail as normal. You can ignore the hail and continue fighting to the end, but this may make other members of your attacker's race even more hostile to you than they already are—and you will end up paying later for your lack of courtesy.

If you decide you don't want to fight, you may choose to gamble and place your ship at the enemy's mercy. Press the **X** and **Y** Buttons at the same time to indicate your desire to talk. You will be returned to the Bridge, where you will find your opponent answering your hail. Go to the viewscreen and communicate normally. If the enemy is well-disposed to you, they may just leave you alone. If your previous conduct has angered the enemy, your ship may be captured and the game will end automatically.

GETTING READY TO GO ON AN AWAY TEAM MISSION

When you want to send an Away Team to investigate a site or take action, you must first visit the Transporter Room. Here you can select between one and four crew members to go on the mission. To reach the Transporter Room, go to the turbolift doors and press

STAR TREK

THE NEXT GENERATION®

the **A** Button. You will receive a briefing from Captain Picard outlining the goals of your mission. If you decide you don't want to beam down right now, press the **X** Button to return to the Bridge. If you want to continue to the Transporter Room, press the **A** Button.

What you'll see

When you first enter the Transporter Room screen, you will see a column of four pictures down the right-hand side. These are the four different members of the Away Team the computer has selected by default. The top face is highlighted in red. Along the bottom is a brief listing of that crew member's traits (TEC = Technical Ability, TAC = Tactical Ability, HEA = Stamina, and STR = Strength). A critically injured crew member is permanently removed from the active duty roster.

Choosing the crew members for the Away Team

On the left-hand side of the screen are the portraits of the crew members available to be chosen for the Away Team (including an empty spot for “no member” if you don’t want anyone in that position). The pictures of people who were critically injured on a previous mission are dimmed. These people are recovering and are not available for future missions.

You can change which box is highlighted in the right-hand column by holding down the **Y** Button and pressing the **Up** and **Down** arrows on the Control Pad; the box that is highlighted when you release the **Y** Button is the character you are changing. You may then use the **Up**, **Down**, **Left** and **Right** arrows to highlight different faces. The highlighted face will appear in the red-outlined box in the right-hand column, and that crew member’s traits will be shown along the bottom. Repeat the procedure until you have selected the Away Team you want. If you decide to cancel the mission without beaming down, press the **X** Button to return to the Bridge. Otherwise press the **A** Button twice to transport to the site you want to explore.

NOTE: Different crew members have different combinations of skills. Some Away Team missions may require different skills to deal with the problems they present. Sometimes it may help if you choose team members who have talents different from one another.

STAR TREK

THE NEXT GENERATION®

AWAY TEAM MISSIONS

THE CREW MEMBERS OF THE AWAY TEAM

When you send the Away Team on a mission, you will see them transport to the location the transporter chief has chosen for them. Along the right-hand side of the screen is a column of portraits for the crew members you chose to be on the Away Team. A red highlight indicates the team member who is currently “active,” meaning this is the member who will do things when you use the controls.

THE INVENTORY BAR

Along the bottom of the screen is a bar with pictures of the things in the active crew member's inventory. Each crew member has his or her own inventory, which is assigned automatically depending on the crew member's position and skills. The first item in the inventory will be highlighted in red.

THE MESSAGE BAR

Just above the inventory bar is the message bar. When you highlight a new object in the inventory bar, its name appears in the message bar. When you use a tricorder or talk to someone you meet during your mission, the message will appear in this area.

THE HEALTH GAUGE

Next to the inventory bar is a horizontal red line that gauges the active crew member's state of well-being. If the crew member is wounded or otherwise injured, the line will grow shorter. A crew member is considered critically injured if the gauge drops too low.

If there is a medical officer along on the mission, the crew member can be healed by having the medical officer use a tricorder on him, as explained in the section on standard inventory items.

THE PHASER CHARGE GAUGE

If the active crew member is carrying a phaser, there will be a horizontal gauge just below the health gauge showing how much charge is left in the phaser. A phaser that's totally out of charge will not fire, but a crew member may be lucky enough to find a new power pack to recharge it.

MEDICAL PACKETS

If the active crew member is a medical officer, there will be squares just below the health gauge showing how many medical packets that officer has left. The

STAR TREK

THE NEXT GENERATION®

officer starts a mission with three packets. Each time she heals someone, one packet is used up. Lt. Commander Data cannot be healed by using a medical packet on him.

THE ACTION SCREEN

The biggest part of the screen shows you what's happening to the Away Team while it's exploring this unknown world. This is where much of the game's action takes place.

PICKING THE ACTIVE TEAM MEMBER

Each of the crew members in the Away Team can move independently from the others. The crew member whose picture is highlighted is the one who will do things when you press the controls. You can change the active crew member by holding down the **Y** Button and pressing the **Up** or **Down** arrow on the Control Pad; this will highlight the different portraits in the right-hand column. The portrait that's highlighted when you release the **Y** Button is the new active crew member.

USING THE CREW MEMBER'S INVENTORY

The inventory bar only shows the inventory of the currently active crew member. Pressing the **R** or **L** Button lets you scroll through the different inventory items, highlighting each one in turn. For the crew member to use a particular inventory item, that item must be highlighted. Pressing the **A** Button makes the crew member use the highlighted item. Nothing will happen if the

item can't be used in this situation. See the section below, "The Standard Inventory Items," to see what the most common objects do.

Each crew member may have up to six different items in his or her inventory. If you need to pick up more things than this, you must spread it out among several crew members.

MOVING THE ACTIVE CREW MEMBER AROUND

Use the **Up**, **Down**, **Left** and **Right** arrows to move the active crew member around so he or she can explore the world. Nothing will happen if the crew member can't move in that particular direction.

PICKING UP OBJECTS

If the crew member finds something you think might be useful, use the **B** Button to try to pick it up. If you pick it up successfully, its icon will appear in that crew member's inventory bar; if that crew member's inventory is full or if you cannot pick it up, nothing will happen.

Pressing the **B** Button also lets the crew member use his hands on whatever he's standing next to—for example, to press a button or pull a switch.

COMPLETING YOUR MISSION

When you successfully complete your mission to this world, you will automatically be beamed back aboard the ship.

INJURED CREW MEMBERS

If any of the ship's major officers is critically injured, the mission automatically ends. The officer will be beamed back to Sick Bay to have his or her injuries tended to. Pressing any button will take you to the Bridge, where you will be free to start the mission over again.

If a crew member who is not one of the major officers is critically injured, the mission does not automatically end. The crew member will lie where he or she fell, but any other crew member with enough inventory space may pick up a fallen comrade's inventory objects by walking over that person..

The game ends automatically if Captain Picard is critically injured or if at any point you have injured a total of three of the other major officers during the course of the game. When this happens, you must restart the game from the beginning.

INCOMPLETE MISSION

If you want to end an Away Team mission before it's completed—for instance, if you want to change the members of your Away Team—press the **X** and **Y** Buttons at the same time. This will take you back to the Transporter Room on the Bridge.

When you restart a mission you didn't complete—either because a crew member was injured or because you ended the mission early—you will find yourself starting over. Anything you picked up will be back in its

original place and anything you accomplished on your previous attempt will be wiped out—except for your memory. The experience you gained on your last attempt may help you achieve your goal this time.

THE STANDARD INVENTORY ITEMS

Phaser

The phaser is the personal defensive sidearm of Starfleet. It shoots a laser-like energy beam at a target. A phaser has a limited amount of charge, but can be recharged with a new power pack. Phasers can kill, but are normally set on “stun.” Only crew members with high tactical ratings are given phasers in their inventories.

Tricorder

The tricorder is a hand-held scientific instrument that allows trained personnel to analyse objects in their vicinity. When the tricorder is used on an object, it gives you a message that only technically trained people can interpret. Thus, only crew members with high technical ratings are given tricorders in their inventories. They will explain the tricorder’s readings for you in basic terms.

If a trained medical officer uses a tricorder on someone who’s been less than critically injured, the injured person will be healed as long as the medical officer still has at least one medical packet.

STAR TREK

THE NEXT GENERATION®

Command insignia

When an officer has the command insignia in his or her inventory, that person can use it to make other crew members follow him or her around.

Simply highlight the insignia and move the active crew member to touch other crew members. The ones who are touched will follow the commander's lead.

To make a crew member stop following the team leader, simply make that person the active crew member and move him or her away from the group. That crew member will then be independent until the command insignia is used on him or her again.

STARBASES

There are three official Starfleet starbases within the region of space your ship patrols: Starbase 202 (located at Signis Epsilon IB), Starbase 205 (at Woki Beta VIIIA) and Starbase 220 (at Codis Zeta VA). Starbases maintain complete drydock facilities. Your ship should visit a starbase when it needs quick repair of major damage or when it is running low on photon torpedo casings.

Starbases are also the places where you get the official Starfleet passwords that allow you to save the game. See the next section, "Saving the Game," for more details.

SAVING THE GAME

GETTING THE PASSWORD

The password lets you restart the game at the same position you were in when you first got that password. Using the password keeps you from having to replay Away Team adventures you've already completed.

You will be assigned a password each time you visit one of the starbases. Go to the ship's library computer if you don't remember where the starbases are. The computer will also tell you what the current password is. You might want to write the password down, along with a brief description of where you are in the game, before you turn off your Super Nintendo Entertainment System so you can start up again approximately where you left off.

STAR TREK THE NEXT GENERATION®

USING THE PASSWORD

Go to the ship's computer and select the topic "Password System." Choose the subtopic "Password." To enter the password, press the arrow keys on the Control Pad until the first digit of your password is highlighted, then press the **A** Button. Continue with this procedure until you have selected all your password's digits correctly, then press the **A** Button again. You will now find the game in the same state as when the password was issued. The game clock will be at the same setting, any Away Team missions you completed will be completed, and any injured crew members who were unfit for duty will still be that way. Press the **X** and **Y** Buttons together to exit from the computer without choosing a password.

If you make a mistake while entering the password, press the **X** Button to backspace over the error and then choose the correct digits as before.

THE GAME ENDS WHEN...

- You have successfully completed each mission.
- Your ship is captured by an opposing vessel.
- Captain Picard is critically injured during an Away Team mission.
- A total of three major officers have been critically injured in the course of the game during Away Team missions.
- You commit a major breach of Starfleet regulations.

THE SHIP'S MAJOR OFFICERS

CAPTAIN JEAN-LUC PICARD

The ship's captain is a skilled diplomat with the ability to get straight answers from the people he talks to. He is also a respected leader, admired by his subordinates, and has a special interest in archaeology. **ATTRIBUTES:** *Midrange:* Tactical, Technical, Strength.

COMMANDER WILLIAM T. RIKER

The first officer is more flamboyant than his captain, but still an able officer. He often reacts emotionally, but his basic instincts are usually accurate. He is very skilled with a phaser. **ATTRIBUTES:** *High:* Tactical; *Midrange:* Strength; *Low:* Technical.

STAR TREK

THE NEXT GENERATION®

LIEUTENANT COMMANDER DATA

The ship's science officer is an experimental android, the only one of his kind in the Federation. His artificial body has greater strength and sensory abilities than normal people do, and his positronic brain functions like a computer. His greatest goal, however, is to learn what it is like to be human. He cannot be healed during an Away Team mission by using a medical packet on him. **ATTRIBUTES:** *High:* Tactical, Technical, Strength.

LIEUTENANT COMMANDER GEORDI LA FORGE

The ship's chief engineer, although blind, gets direct neural input from his visor which allows him to "see" in ranges beyond those detectable by sighted people. His wealth of technical expertise makes him a master at analysing tricorder readings. **ATTRIBUTES:** *High:* Technical; *Midrange:* Tactical; *Low:* Strength.

LIEUTENANT WORF

The chief of security is a Klingon orphan who was raised primarily by a human couple. He has greater strength and better fighting skills than a normal human being, but his outlook is very practical and somewhat lacking in imagination. **ATTRIBUTES:** *High:* Strength, Tactical; *Low:* Technical.

DR. BEVERLY CRUSHER

The ship's chief medical officer is an expert in the biological sciences, cybernetics, regeneration, and is skilled at healing humans and aliens alike. As a doctor, she has become adept at analysing tricorder readings. **ATTRIBUTES:** *High:* Technical; *Midrange:* Strength; *Low:* Tactical.

COUNSELLOR DEANNA TROI

The ship's counsellor is half Betazoid, which gives her strong empathic skills to feel the emotions of people around her. This ability not only helps her counsel the ship's crew, but gives her an edge in communicating with aliens as well. **ATTRIBUTES:** *Midrange:* Tactical; *Low:* Technical, Strength.
